New Arabidopsis thaliana nucleic acid for identifying homologous ge producing compositions that modulate the expression or function of encoded protein, and mapping functional regions of protein

Claim 1; SEQ ID NO 223; 49pp + Sequence Listing; English.

compositions that manufacture the expression of intercondent of protein, mapping functional regions of the protein and in studying associated physiological pathways. (I) is also useful for the genetic manipulation of cells, particularly plant cells. (I) is also useful in screening assays of various plant strains to determine the strains that are best capable of withstanding a particular disease or environmental stress. (II) and (III) are useful for screening of biologically active agents, e.g. fungicides, insecticides, etc., for elucidating biochemical pathways. The screened agents are useful in improved methods of treating programs to identify agents that minim or enhance the action of tolerance factors. Such agents are useful in improved methods of treating crops to enhance their tolerance to environmental stress. (I) is also useful or enhancing or inhibiting production there mediators that may induce expression of proteins of interest, for establishing the extent to which a particular plant, for identifying other mediators that may induce particular plant, for identifying other mediators that chance or induce the continuous and a particular plant, for identifying other mediators that chance or induce the continuous and a particular plant, for identifying other mediators that enhance or induce the continuous and a particular plant, for identifying other mediators that enhance or induce the continuous and a particular plant, for identifying other mediators that enhance or induce the continuous and a particular plant, for identifying other mediators that enhance to induce the continuous and a particular plant, for identifying other mediators that enhance to induce the continuous and a particular plant, for identifying other mediators that enhance to induce the continuous and the continuo The invention relates to an Arabidopsis thaliana nucleic acid (I) comprising a sequence capable of hybridising under stringent conditions to a sequence selected from any one of 999 sequences (ABN98233-ABN992331), given in the specification or its fragment. A polypeptide (II) encoded by (I), a transgenic plant (III) comprising an exogenous nucleic acid or a genetically modified cell (IV) comprising an exogenous nucleic acid, is useful for screening a candidate agent for its biological effect. (I) is useful in identifying homologous or related genes, in producing compositions that modulate the expression or function of its encoded for identifying productions of nutritional, commercial or medicinal value. (IV) is useful in the study of genetic function and regulation, for alteration of the cellular metabolism and for screening compounds that may affect the biological function of the gene or gene products. Note: The sequence data for this patent did not form part of the printed biosynthetic pathways of nutritional, commercial, or medicinal value and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δ
                                              The present invention relates to coding sequences (see AAF44740-F44840 and AAF444843-F44844) involved in programmed cell death (PCD: apoptosis). The coding sequences and proteins of the present invention are useful for modulating a PCD or cell death
                                                                                                                                                                                                                                                                                                                                                                                                                                 181

The present invention relates to coding sequences (see AAF44740-F448840 and AAF444844) and proteins (see AAB65714-B65814) involved in programmed cell death (PCD; apoptosis). The coding sequences and proteins of the present invention are useful for modulating a PCD or cell death pathway and various developmental pathways in a forestry plant, by stably incorporating one of the present coding sequences into the genome of the forestry plant, where the coding sequence provides a PCD pathway that is not present in a native form of the forestry plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              337
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             217

polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer associated proteins represented in AAB58106 - AAB58548. Lung cancer associated proteins and polynucleotide sequences, their agonists, and antagonists may have neuroprofective; cyrostatic; cardioactive; and antagonists may have neuroprofective; cyrostatic; cardioactive; and antagonists may have neuroprofective; cyrostatic; cardioactive; and cardioactive; general; nephrotropic; antinifective; general; vulnerary; gastrointestinal activity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide sequences. The lung cancer associated chromosome identification, as chromosome markers, and for numerous other chromosome identification, as chromosome markers, and for numerous other disoncers on a neural; immune, muscular, reproductive, and contractive disorders such as neural; immune, muscular, reproductive, and for numerous contents. The proteins may also be used in the treatment of wounds and insorders. The protein and characterisation of the polynucleotide and protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            209
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           149

This invention relates to a combination comprising several cDNAs that are differentially expressed in activated vascular tissue. The invention also discloses a high throughput method for detecting differentially expressed cDNAs in a sample. The CDNAs of the invention may have antiarteriosclerotic; cytostatic; cardiant; hypotensive; antidiabetic; cytostatic; cardiant; hypotensive; antidiabetic; cytostatic; cardiant; hypotensive; antidiabetic; cytostoropic and cerebroprotective activities and may be used in gene therapy. The CDNAs of the invention may be used in gene therapy. The cDNAs of the invention may be used in a sample, or screening several molecules or compounds to identify a molecule or compound that specifically binds to identify a molecule or compound that specifically binds to the protein encoded by the CDNA may be used to screen several molecules or compounds to identify a ligand that specifically binds to the protein, or to produce or purify an antibody to the protein that can be used to detect a produce or purify an antibody to the protein that can be used to detect a produce or purify an antibody to the protein that can diagnosing, staging, treathing, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, cancer, coronary artery disease, hypertension, diabetes, pre-eclampsia, ischaemia-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: The sequence data for this patent did not form part of the specification, but was obtained in electronic format directly from USPTO at http.seqdata.uspto.gov/sequence.html?DocID=20020137081.
                                                        Combination for diagnosing, staging, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, comprises several cDNAs that are differentially expressed in activated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            for large-scale genetic or gene expression analysis of several new nucleic acid molecules. Antibodies to the proteins encoded by the cDNAs are useful for diagnosing pre-pathologic disorders, and chronic or acute diseases associated with abnormalities in the expression, amount or distribution of the protein. The present sequence represents a cDNA of the invention that is differentially expressed in
                                                                                                                                                                                                          Claim 1; Page -; 18pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      activated vascular tissue.
                                                                                                                                                    vascular tissue

CC A human HepG2 cDNA library was used for library screening. The C invention provides vectors, optionally expression or viral vectors, CC containing BI nucleic acids, and host cells containing these CC vectors. The nucleic acids encoding BI-1/PI-2 can be used to			SQ Sequence 2634 BP; 632 A; 626 C; 597 G; 779 T; 0 other;	3.05e-46 Length: 479.50 Matches:	Percent Similarity: 62.90% Conservative: 557 Best Local Similarity: 40.73% Mismatches: 79 Oner Match: 37.70% Tridels: 13	57.70* INCLES: 19 Gaps: 6-4 (1-248) x AAV59067 (1-2634)	Qy 3 GlyPheThrSerPhePheAspSerGlnSerAlaSerArgAsnArgTrpSerTyrAspSer 22	QY 23 LeuLysasnPheArgGlnIleSerProLeuValGlnThrHisLeuLysGlnValTyrLeu 42	Oy 43 ThrLeuCysCysAlaLeuValAlaSerAlaAlaGlyAlaTyrLeuHisIleLeuTrpAsn 62	Db 169 AGTTTGCCCTTTGTATGTTGTGGCGGCTGCAGGGCCTATGTCCATATGGTCACTCAT 228	Qy 63 IleGlyGlyLeuLeuThrThrMetAlaCysMetGlySerMetValTrpLeuLeu 80	Db 229 ITCATICAGGCIGGCCIGCIGCCTIGGGCICCCTGATATIGATGATGATGATG 288	Qy 81 SerAlaProProTyrGlnGluGlnLysArgValAlaLeuLeuMetAlaAlaa 98	Db 289 GCAACACCTCATAGCCATGAACTGAACAGAAAAAACTGGGGACTTCTTGCTGGATTTGCA 348	Qy 99 LeuPheGluGlyAlaSerIleGlyProLeuIleGluLeuGlyIleAsnPheAspProSer 118	Db 349 TICCTTACAGGAATIGGCCTGGGCCTGCCCTGGAGTTTTGTATIGCTGTCAACCCCAGC 408 Oy 119 IlevalPheGlyAlaPheValGlyCysAlaValValPheGlyCysPheSerAlaAla 138		Oy 139 MetLeualaargargargluTyrLeuTyrLeuGlyGlyLeuLeuSerSerGlyValSer 158 :::	469 CTCTATGCCAGGCGCCGTAGCTATTTTGGGGAGGTATGTTGATGTCAGCCTGAGC 52		, 6	586 GCAAACCTGTATGTGGGGACTGGTGGTGTGGGCTTCGTCCTTTTTGATACTCAACTC	199 IlelleGluIvsAlaHisLeuGlyAspMerAspTvrValIvsHisAlaLeuThrLeuPhe 21		Qy 219 ThrAspPheGlyAlaValPheValArgIleLeulleIleMetLeuLysAsnAlaSerGlu 238	Db 706 TIAGATITCATIACTGICTICAGAAAACTCATGATGATGCTGGCCATGAATGAA 759	239 LysGluGluLysLysLysLysArg	Db 760 AAGGATAAGAAGAAGAAGAAA 783

```
chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the subject to a pathogen or sterile inflammatory disease using the gene expression profile; (3) detecting (M4) an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the level of expression of the gene is indicative of inflammation.

(4) treating (M5) an inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having or sterile inflammatory disease, by contacting a tissue having or sterile inflammatory disease, by contacting a tissue having constitution with an agent that modulates the expression of gene(s) from Gs in the tissue. M1 is useful for screening an agent capable of modulating GCA preferably in an inflammation in a tissue; M4 is useful for cepering an authore, exposure of a subject to a pathogen or sterile inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease (e.g. psoriasis, rheumatoid arthritis, gathma, thrombosis, cardiac reperfusion injury, RBS, adult respiratory distress syndrome, inflammatory bowel disease, Crohn's disease, ulcerative colitis, periodontal disease; also bacterial infection, viral infection, parasitic infection, protozoal infection, viral infection and M5 is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and drug toxicity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         invention relates to detecting (M1) granulocyte (GC) activation
                                                                                                                                                                                                                                                            rheumatoid arthritis, glomerulonephritis; asthma; thrombosis; cardiac reperfusion injury; renal reperfusion injury; ARDS; adult respiratory distress syndrome; inflammatory bowel disease; crohn's disease; ulcerative colitis; periodontal disease; granulocyte activation; chronic inflammation; allergy.

Also included are modulating (M2) GA by contacting GC with an agent that alters the expression of at least one gene in Gs, (2) screening (M3) is a form an inflammation (especially charge).
                                                                                                                                                                                                                                                                                                                                                                                                          chip; bacterial infection;

                                                  q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a composition comprising a human GDP-mannose 4,6 dehydratase (GM4,6D) peptide. The peptide is useful for identifying GM4,6D inhibitors. GM4,6D inhibitors are useful for reducing inflammation in a mammalian subject and for treating or ameliorating diseases affected by the level of cellular fucosylation or diseases affected by the fucosylation of glycoconjugates. These diseases include arthritis,
                                                                                                              cellular fucosylation; glycoconjugate fucosylation; transplant rejection; arthritis asthma; sepsis; reperfusion injury; stroke; infection; complex carbohydrate; gene replacement therapy; immunosuppressive; antilarlammatory; antilarthritic; antibacterial; cerebroprotective; antilasthmatic; vasotropic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      transplant rejection, asthma, sepsis, reperfusion injury, stroke or infection. The GM4.6D peptide or a polynuclectide encoding it is also useful for manufacturing complex carbohydrates and as targets for screening small molecule antagonists of the activity of the enzyme. The polynuclectide is useful in developing an assay for defects in the enzyme, as well as in gene replacement therapy. Sequences
ABX17942-ABX17944 and ABX17947-ABX33716 represent DNA molecules encoding human GM4.6D peptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO
                                                                                                                                                                                                                                                                                                                                                                                                                                        New composition comprising GDP-mannose 4,6-dehydratase (GM4,6D) peptide, for manufacturing complex carbohydrates, or as targets for screening GM4,6D antagonists for treating e.g. arthritis, or transplant

                                                             δŏ
of ovarian antigen polynucleotides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast-related disorders. Such conditions include ovarian cancer and breast cancer, and metastatic tumours of ovarian or breast origin, reproductive system disorders (e.g., infertility, disorders of pregnancy, anovulation, polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine disorders, infections (e.g., chlamydda, HTV, toxoplasmosis, and toxic shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and immunodeficiencies, autoinmune oophoritis, systemic lupus erythematosus), blood-related disorders (e.g., anaemia), cardiovascular disorders, respiratory disorders, neurological disorders, gastrointestinal disorders and uninary system disorders. Ovarian antigen polypeptides and polynucleotides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polynucleotides may currentes and in forensic analysis, and the definitioation of individuals and in forensic analysis, and the collynucleotides may be used as food additives or to prepare antibodies used used in a stage of arguerian antigen of the present sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             118

The invention relates to a human colon tumour expressed polynucleotide (I) encoding a polypeptide (II, ABP67991-ABP67996) comprising: (i) any of 2600 fully defined nucleotide sequences (ABV8669-ABV89289); (ii) complements of (i); (iii) at least 20 contiguous residues of (i); (iv) sequences that hybridize to (i), under moderately stringent conditions; (v) sequences having at least 75% or 90% identity to (i); or (vi) degenerate variants of (i). The compositions and methods of the present invention are useful for the diagnosis, prevention and/or treatment of cancer, particularly colon canneer. (I) can be used in gene therapy and (I) and (II) are useful in pharmaceutical compositions such as vaccines.

capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell signalling cell signalling cell signalling cell signalling cell signalling discloses genomic in higher eukaryotes for the development of discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01940-ABL16175) and the encoded proteins (ABB57737-ABB72072).

The sequence data for this patent did not form part of the printed aspecification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                     QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
cancer in a patient;
(d) assessing the efficacy of a test compound to inhibit prostate
(d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ----CGAAAGATCAACTTTGATGCG 130

/clone_lib="0H_EFGHJ sunflower RHA280"
/clone_lib="0H_EFGHJ sunces of RNA from a single genotype.
Separate cDNAs were generated using primers that
incorporated unique 5' and 3' tags to distinguish each
source of RNA. cDNAs were then pooled, size-fractionated,
directionally cloned into a custom medium-copy vector and
transformations and with four size classes to minimize
size bias. Details of each source of RNA and library
construction can be obtained at http://cgpdb.ucdavis.edu/

/note="Vector: pBRcDNASfiAB; The library was constructed
from 10 different sources of RNA from a single genotype.
Separate cDNAs were generated using primers that
incorporated unique 5' and 3' tags to distinguish each
source of RNA. cDNAs were then pooled, size-fractionated,
directionally cloned into a custom medium-copy vector and
transformations made with four size classes to minimize
size bias. Details of each source of RNA and library
construction can be obtained at http://cgpdb.ucdavis.edu/
